PROFESSIONAL SUMMARY

Game Programmer with 2+ years of professional experience specializing in Unity and C#, with 55+ game and playable projects developed across mobile and WebGL platforms. Experienced in building gameplay systems, player movement, camera systems, AI, UI, animation, physics, and performance-optimized game logic. Strong interest in AI-assisted development and automation, using modern AI tools to accelerate prototyping, debugging, system development, and development workflows. I work closely with designers, artists, and QA to turn ideas into functional, polished gameplay while building reusable, scalable systems and solving complex technical challenges.

WORK EXPERIENCE

Gameplay Programmer, Funcell Game PVT LTD

Nov 2024 - Present

Developed and shipped 55+ playable advertisements for Android, iOS, and WebGL platforms, specializing in TypeScript with Three.js and C# with Unity 3D. Built high-performance, interactive experiences that combine engaging gameplay across multiple genres.

Key Responsibilities & Achievements

- Developed and shipped 55+ playable ads across multiple genres, including hyper-casual and idle games.
- Leveraged AI-assisted development and automation tools to speed up prototyping, debugging, code generation, technical investigation, and repetitive development workflows.
- Designed and implemented core gameplay mechanics, player controllers, camera systems, AI behaviors, and UI interactions.
- Built reusable gameplay frameworks and modular systems to accelerate development across projects.
- Optimized games for WebGL and mobile platforms, improving performance, memory usage, and loading times.
- Created scalable, maintainable gameplay architecture following clean coding principles and industry best practices.
- Collaborated closely with game designers, artists, and QA teams to deliver polished, production-ready experiences.
- Identified, debugged, and resolved gameplay and performance issues to ensure stable, high-quality releases.
- Contributed to rapid prototyping, feature iteration, and gameplay balancing throughout the development lifecycle.

Gameplay Programmer (Internship), Funcell Game PVT LTD

Fab 2024 - Sep 2024

- Completed structured training in Unity and Git.
- Fixed bugs and implemented small gameplay features..
- Learned production workflows and optimization techniques.

EDUCATION

Bachelor of Technology, Computer Engineering

- SILVER OAK UNIVERSITY
- 2023 - 2026

Diploma of Education, Computer Engineering

- Ganpat University
- 2020 - 2023

CERTIFICATIONS

- Speaker in the session "Game Development 101" GDG On Campus BVM (Sep 2025)
- Complete C# Unity Game Developer 3D Udemy (Nov 2024)
Credential ID UC-c9d8efa6-f512-4ccd-a661-8e3cb051936e

FEATURED PROJECTS (Unity)

- **Scrap Yard King (Idle Tycoon)**

Developed the core gameplay architecture for a scalable action-idle tycoon, including player movement and harvesting, physical item and carry systems, machine-based production pipelines, economy, worker automation, customer interactions, upgrades, tasks, and world expansion. Designed modular, data-driven systems using Unity and ScriptableObjects to support scalable progression from manual scrap collection to automated industrial recycling.

- **Idle Bakery Cafe (Idle Tycoon)**

Developed the core architecture for a scalable idle bakery/cafe simulation, including player movement, camera systems, production machines, customer flow, inventory/stacking, staff automation, economy, upgrades, missions, and area progression. Built interconnected gameplay systems for baking, stocking, serving, cash collection, and restaurant expansion, with a data-driven architecture designed for scalable content and future expansions.

- **Juice King Tycoon (Idle Tycoon)**

Developed a scalable 3D arcade-idle tycoon game in Unity, architecting core gameplay systems including player movement, chainsaw-based harvesting, item stacking, juice production, customers, workers, upgrades, economy, rewarded ads, offline progression, and dynamic delivery logistics. Built a multi-world expansion framework with data-driven progression, procedural environment generation, save/migration systems, and automated gameplay systems, while optimizing the experience for mobile performance and portrait gameplay.

FEATURED PROJECTS (Playable ads)

- **Flop House (Idle Tycoon)**

Developed the core gameplay architecture, including player controller, camera system, machine interactions, and progression mechanics. Built scalable gameplay systems and progression mechanics for an idle tycoon experience.

- **Wild West Miner – Gold Rush**

Implemented first-person gameplay, fake physics, terrain digging, mesh deformation, and dynamic depth calculation systems. Developed immersive mining mechanics with optimized performance.

- **Eye Color Mix**

Created a dynamic eye-color customization system using texture-based color detection, random color sampling, and mesh baking. Implemented accurate color correction and real-time visual updates.

TECHNICAL SKILLS

Game Development

- AI Automation
- Unity
- Cocos Creator
- Three.js
- WebGL
- Playable Ads

Tools

- Git
- VS Code
- GitHub
- Claude Code
- Unity CLI
- MCP
- Claude
- OpenCode

Gameplay

- AI
- Camera Systems
- UI
- Gameplay Architecture
- State Machines
- Grid Systems

Programming

- C#
- TypeScript
- JavaScript

Optimization

- Memory Optimization
- Performance Profiling
- Object Pooling

LANGUAGE

- English
 - Hindi
-
